Installation

Use the exploded view drawings for reference.

1. Remove the screws that attach the stock recoil to the back of the engine.

2. Remove the recoil and one-way bearing from the engine. Note the direction the one-way bearing is installed for proper reinstallation.

3. Install the one-way bearing into the Kwik-Pit Super Start RTR spur gear. **Note:** Be sure the one-way bearing is installed in the same direction it was originally.

4. Place the spur and pinion gears into the mounts on the front section of the gear case.

5. Rotate the adjustable center section of the gear case to the desired position.

6. Align the front, center, and rear sections of the gear case and press them together. Once properly seated, the case will fit together evenly around the entire edge with no gaps.

7. Align the screw holes of the adapter with the original recoil mounting points and install using the included 2.6mm x 12mm hex head screw.

8. Reinstall the engine according to the manufacturer's recommendations.

Operation

Use the exploded view drawings for reference.

1. Install a charged 7.2V battery (not included) into the hand held starting unit.

2. Close the battery door and plug in the battery.

3. Place the hex end of the starter shaft into the hand held starting unit.

4. Turn on the radio system and check for proper operation.

5. Install the glow plug igniter.

6. Insert the starter shaft into the back of the engine adapter unit and press the starter switch to activate. **Note:** Stop the starter if the engine does not start within 10 seconds, or if it becomes more difficult to turn over. If the engine did not start, recheck the needle settings and glow plug, or clear out the flooded engine according to the manufacturer's recommendations and retry.

Replacement Parts

- Super Start Backplate Set ..................... DTXP6034
