

albatros

Tech Notice

If you would like to add some extra detail to your Albatros DV, you can install the optional pilot figure and machine guns.

Flyzone
how high will you soar

To install the machine guns, place a drop of foam-safe CA adhesive on each of the three mounting feet on the bottom of the machine gun base. Fit the guns to the three corresponding notches just ahead of the cockpit. **Note:** Our picture shows this with the top wing removed for clarity. You should not need to remove the wing to install the guns.

If you want to paint the pilot, please use acrylic paints (water-based) and a fine point brush. We suggest using an Atlas 10/0 XF brush (ABSR7286) for the fine detail work, and an Atlas #0 XF brush (ABSR7281) for the larger areas. Paint the large areas and light colors first.

1. Start with the face [Skin Tone Warm, TESR3602 (#4603)].
2. Follow with the jacket and the hood [Burnt Sienna, TESR3606 (#4607)].
3. Next, paint the goggles and safety belt straps [Raw Umber, TESR3605 (#4606)].
4. Finish by painting the lenses for the goggles and the safety belt buckles [Silver, TESR3680 (#4678)].

Install the pilot figure in the cockpit with one drop of foam-safe CA adhesive.
