

de Havilland

TIGER MOTH

TECHNICAL NOTICE

Please refer to this notice when you get to step 6 on page 5.

If you encounter any difficulty inserting the cabanes down into the built-in “pockets” in the fuselage, use sandpaper or a hobby knife to shape a slight bevel to the bottom edges of the cabane. This should help guide the cabane down past any small obstruction (such as excess glue or a small sliver of wood) that may be in the opening of the pocket.
