

Lancair EP

Tech Notice

The ESC included with the Lancair EP is both NiMH and Lithium Polymer compatible. In order to use a LiPo battery pack in the Lancair EP, the battery type jumper must be moved to the LiPo mode pins as shown in the picture. The two jumper pins used for LiPo battery packs are labeled with an "L" on the printed circuit board of the ESC.

If using a LiPo pack, we suggest choosing an 11.1V 1250mAh pack (GPMP0823 or GPMP0609) paired with an 8 x 8 electric propeller (APCQ4116). **DO NOT** use the propeller supplied with the Lancair EP with an 11.1V LiPo pack because the excessive current draw will cause the motor to overheat and become damaged.
