

TECHNICAL NOTICE

When installing the 2mm x 4mm self-tapping screws into the adjustable clevises, be sure that the screw head fits into the recessed side of the clevis as shown. Installing the

screws in the wrong direction may not properly tighten the clevis onto the pushrods.

Upon further extensive flight testing, we have found that the Great Planes® YAK 54 EP 3D ARF and Reactor™ EP 3D ARF performs best with the ElectriFly™ RimFire™ 35-30-950 brushless motor (as stated in the instruction manual) and an APC LP11038SF 11" x 3.8" Slo Fly propeller (APCQ5017).
