

## ***Reactor EP 3D ARF Manual Addendum***

The design of the interlocking wing spars has changed slightly to make alignment much easier and quicker. The procedure in the manual on pages 9 and 10 for gluing the wing panels into the fuselage remains the same.

Step #6 on page 10 of the manual shows a single balsa spar doubler. Two spar doublers are now included instead of just one, and they are made of plywood instead of balsa. Coat one side of each spar doubler with epoxy as well as the front and back sides of the spars. Position a spar doubler on each side of the spars as shown and use clamps to hold them in place while the epoxy cures.
