

IMPORTANT!

The included connector type is “non-standard”.
Observe the polarity of your battery before connecting.

Older Heli-Max (Novus) batteries will charge properly with current lead polarity (red to red/ black to black).

Newer Heli-Max batteries will require the reversal of the banana plugs at the charger for proper polarity.

If you are unsure about the proper charging connection, do not proceed with charging. Please call 217-398-8970 for support.
