

COMPACT E-BOX

Recommended Accessories

The ElectriFly™ Compact E-Box was designed to use the Hobbico® TorqMaster™ LC sealed battery (HCAP0800) or other sealed batteries of the same size and to fit the Great Planes® ElectriFly™ Triton™ charger (GPMM3150) or the Hobbico Quick Field Charger™ MKII (HCAP0290). Fitting any other charger may require modifications to the box. The battery connectors on the chargers will also need to be changed to banana plugs (HCAP0310).

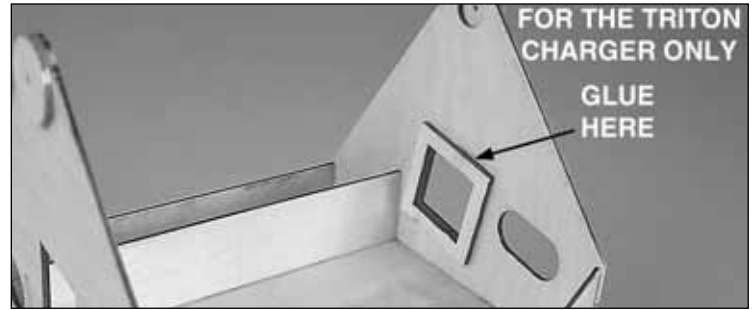

Get Your Box Ready to Use

1. Slide the sealed battery into the bottom of the Compact E-Box, connect the spade connectors to the battery and replace the hatch screws. Note the polarity of the battery (red spade connector goes with red wire and positive battery terminal).

2. Spread the sides of the box slightly, to allow the charger to slide down, then slide the charger into position.

Note: If using the Triton charger, glue in the square spacer as shown. Also, change the alligator clips to banana plugs (HCAP0310).

3. Install the handle and the screws. Cut the charger's battery wire to length and solder banana plugs on it. Plug the charger in. Be certain to match wire and plug colors to respect polarity. To turn the Triton charger off, unplug one of the leads.
