

PHOENIX MODEL® **K8B 3500MM SAILPLANE ARF**

TECHNICAL NOTICE

Some versions of the instruction manual state that the recommended center of gravity (C.G.) is 100mm [3.94"] back from the wing's leading edge where it meets the fuselage. This is incorrect. ***For your first flights the C.G. should be positioned 80mm [3.15"] back from the wing's leading edge where it meets the fuselage.*** As you become familiar with the flying characteristics of the K8B 3500mm sailplane, you can make small adjustments to the C.G. to suit your tastes.
