

Cessna 182[®]

SKYLANE™

INSTRUCTION MANUAL ADDENDUM

The holes in the main landing gear for the 8-32 x 1-1/2" axle bolt and the #2 x 3/8" sheet metal screw may be sized incorrectly. If necessary, wearing a glove on the hand holding the gear, enlarge the hole for the axle with an 11/64" (or 3/16") drill. If the hole for the #2 sheet metal screw is too large, a #4 x 3/8" screw should be substituted.

OPTIONAL: If you wish to drill another hole in the gear for a second pant mounting screw, drill a 1/8" hole in the gear where shown for the second #4 x 3/8" screw.
